## Inférences traditionnelles comme n-lemmes<sup>1</sup>

**Abstract:** In this paper we propose to present from a new perspective some *loci communes* of traditional logic. More exactly, we intend to show that some hypothetico-disjunctive inferences (i.e. the complex constructive dilemma, the complex destructive dilemma, the simple constructive dilemma, the simple destructive dilemma) and two hypothetico-categorical inferences (namely modus ponendo-ponens and modus tollendo-tollens) particularize two more abstract inferential structures: the constructive *n*-lemma and the destructive *n*-lemma.

**Keywords:** *n*-lemma, hypothetico-disjunctive inferences, hypothetico-categorical inferences, expanded structure, simplification
