*« Le système de la langue, (...) tout en étant central, est loin
d'être le seul à permettre la communication. »
Jean-Blaise Grize²*

Abstract: The present study is an invitation to explore, and then exploit and valorize the natural logic (designed by Jean-Blaise Grize) from the discourse analysis (French school) perspective, articulated on the socio-pragmatical context of the interaction that is the discourse/text as support for communication phenomena. The natural logic is the proper approach for this, because of its interest the contents of the forms, for the argumentations and the fact that they imply the existence of a subject who produces arguments as well as of another subject to whom those arguments are intended and who is their interpreter.

Keywords: argumentation, communication, inference, interpreting, model, schematization, speaking subject/interlocutor, sense, signification
