## **La pensée ouverte de Denis Miéville**

### **The Open Thinking of Denis Miéville**

**Abstract:** His interpretation of the works of Lesniewski and Grize is at the origin of a criticism of the axiomatic. Following them, Miéville develops an open and creative thinking. Critical of standard logic, his work highlights a creative dynamic and the presence of contexts that produce their truths. Respectful of each person's preferences: logical, mathematical, philosophical, even spiritual, it invites research and creation, much more than the institutionalization of knowledge: open thinking.

**Keywords:** logic, axiomatic, creative, context, openness
